

Hand Embroidery I Tutorial

## Description

Embroidery is a skill, a craft, an art in its own right. As we have previously explored in our [Artisan Embroidery series](#), modern artists, designers, crafters have really pushed the boundaries of its uses as well as possibilities of this ancient craft. Over the next two weeks we will introduce you, (or perhaps refreshen your memory) on 16 most common stitches. This will give you a head start and a basic set of skills to open your wings and really own this craft to propel your own projects to a new level.

## ***Tools***

Fabric  
Darning/embroidery needle  
Embroidery thread  
Embroidery hoop  
Scissors  
Soluble fabric marker

## ***Steps***

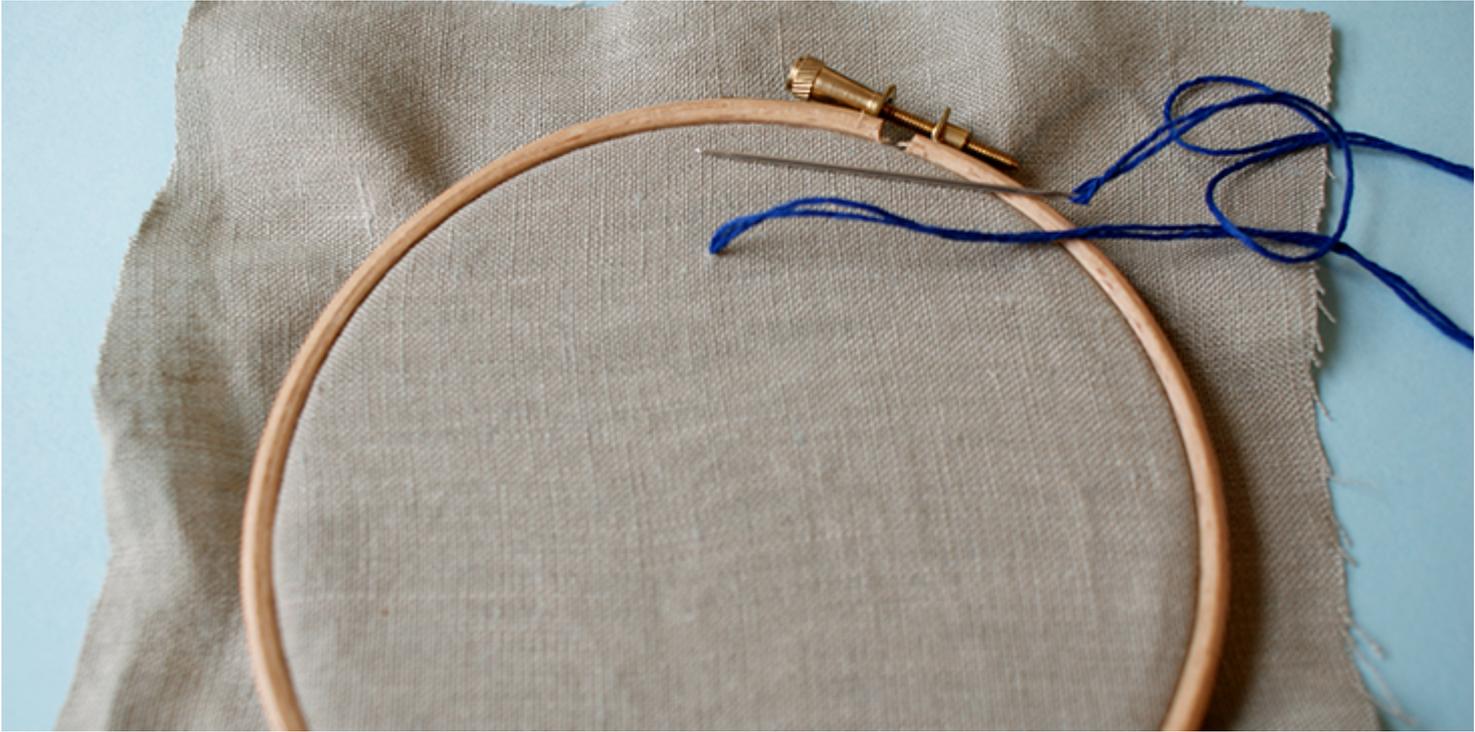

1. Iron the fabric.
2. Separate the hoop into two parts. Place the fabric on top of the smaller hoop, then fit the outer hoop over both fabric and the smaller hoop and tighten the screw.

## ***Straight Stitch***

Straight stitch (flat stitch) is the most basic stitch in hand embroidery in which individual stitches are made without looping or crossing the thread. These stitches are used to form broken or unbroken lines, fill shapes, and create geometric designs.

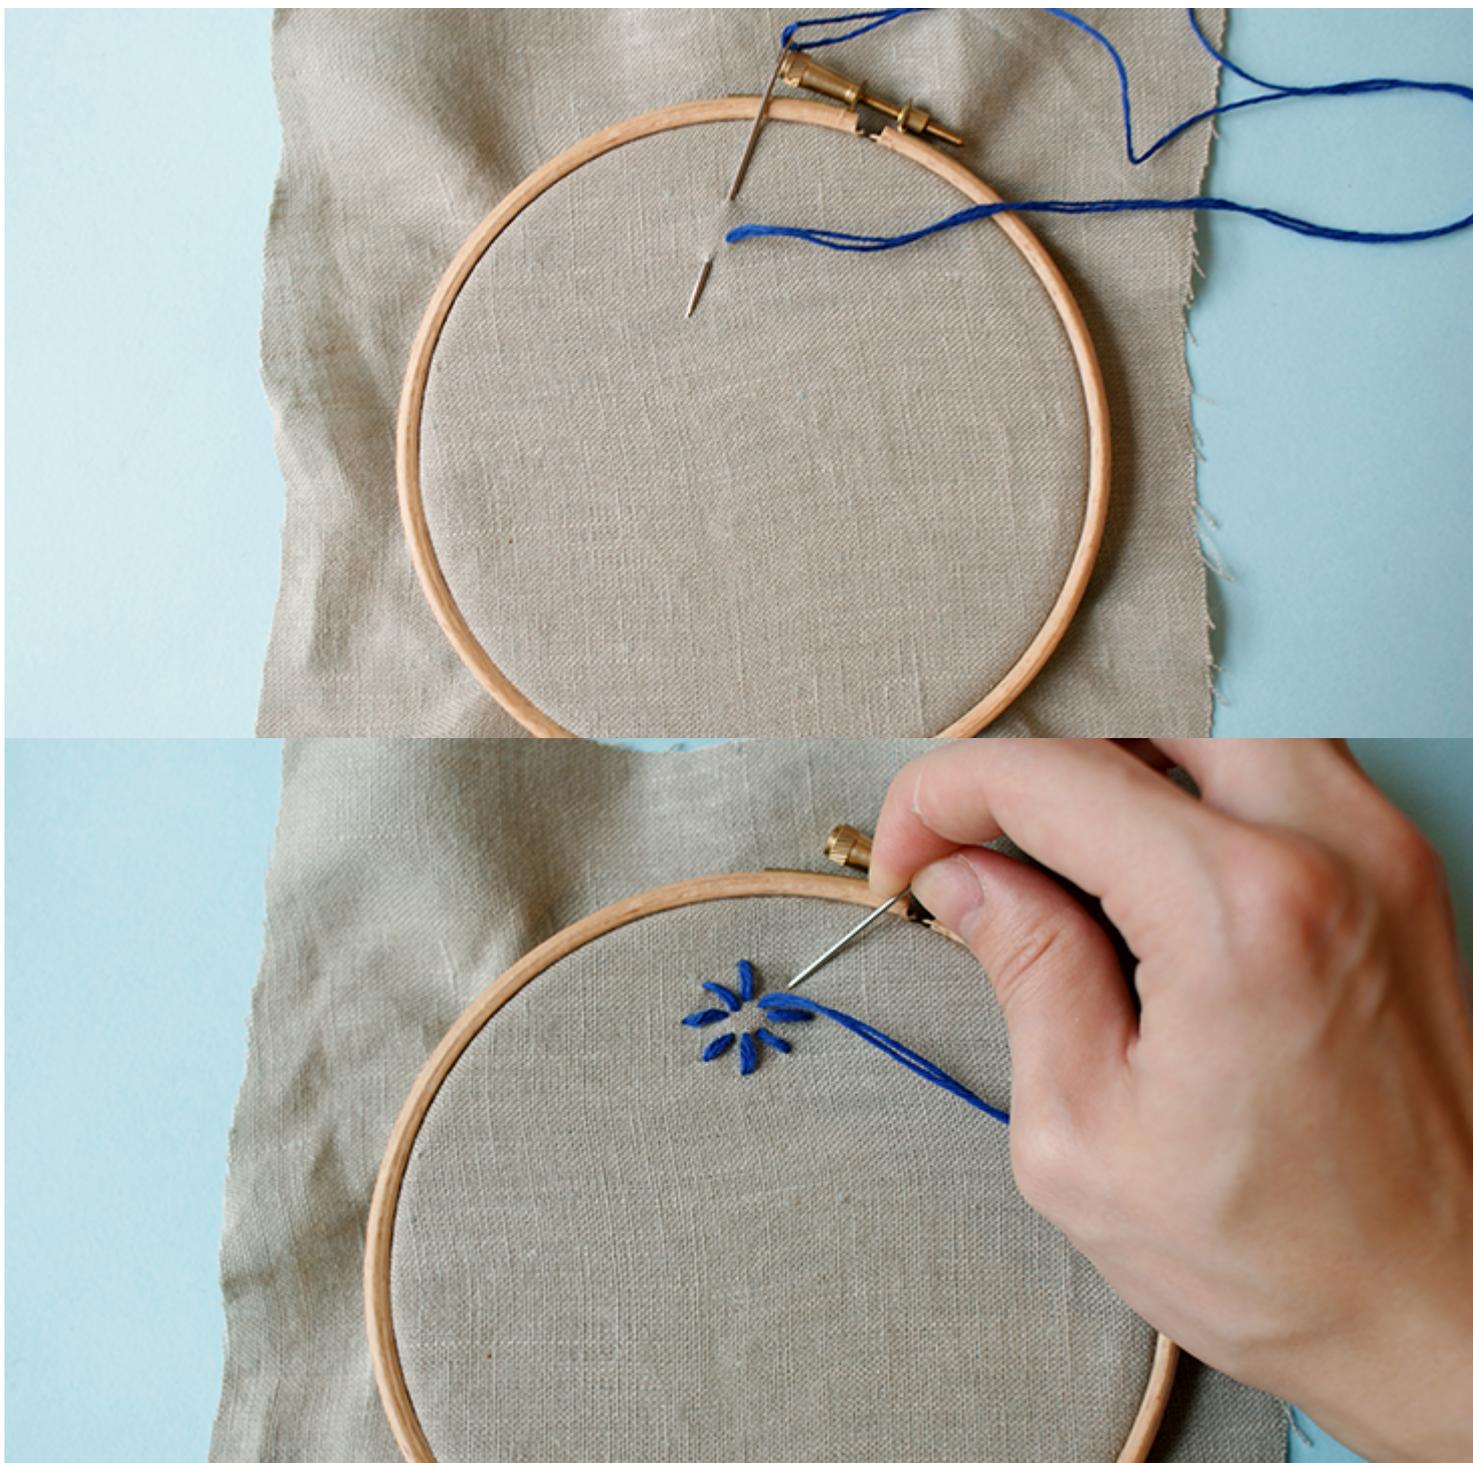

1. Bring the threaded needle out from the fabric at point A.

2. Punch and poke/stab the needle back into the fabric at point B.

3. This can then be repeated to form a pattern (as shown in the photo) or a broken or unbroken stitched line.

## Running Stitch

Running stitch is a stitched line made up by a series of broken straight stitches. Running stitches are used in hand-sewing and tailoring to sew basic seams, in quilting to hold the fabric layers and batting or wadding in place. [Kantha stitch](#) is a type of running stitch.

1. Bring the needle out from fabric at point A.
2. You can either push the threaded needle in and out of the fabric in a continuous motion.

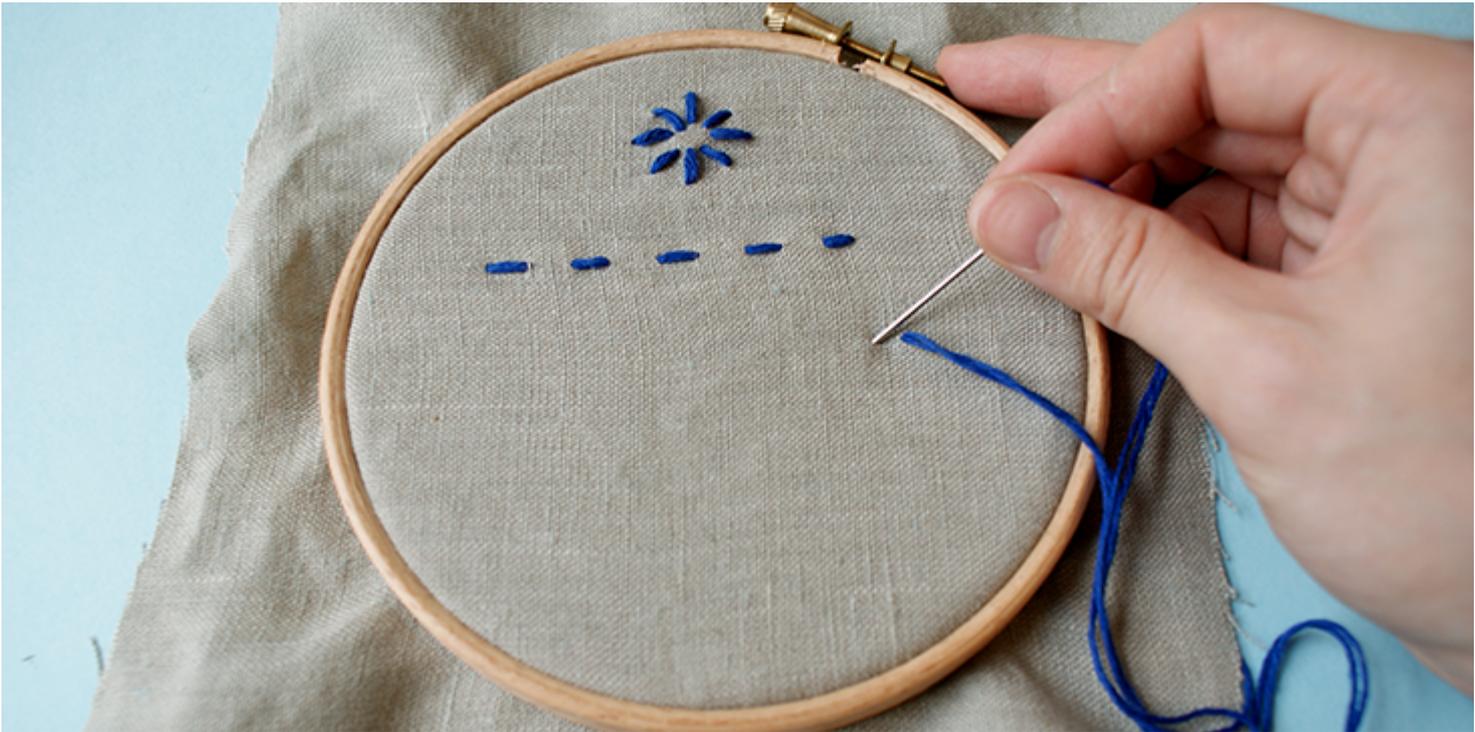

3. Or you can push and needle to the back of the fabric and bring it forth again. This is known as punch and poke, or stabbing technique.

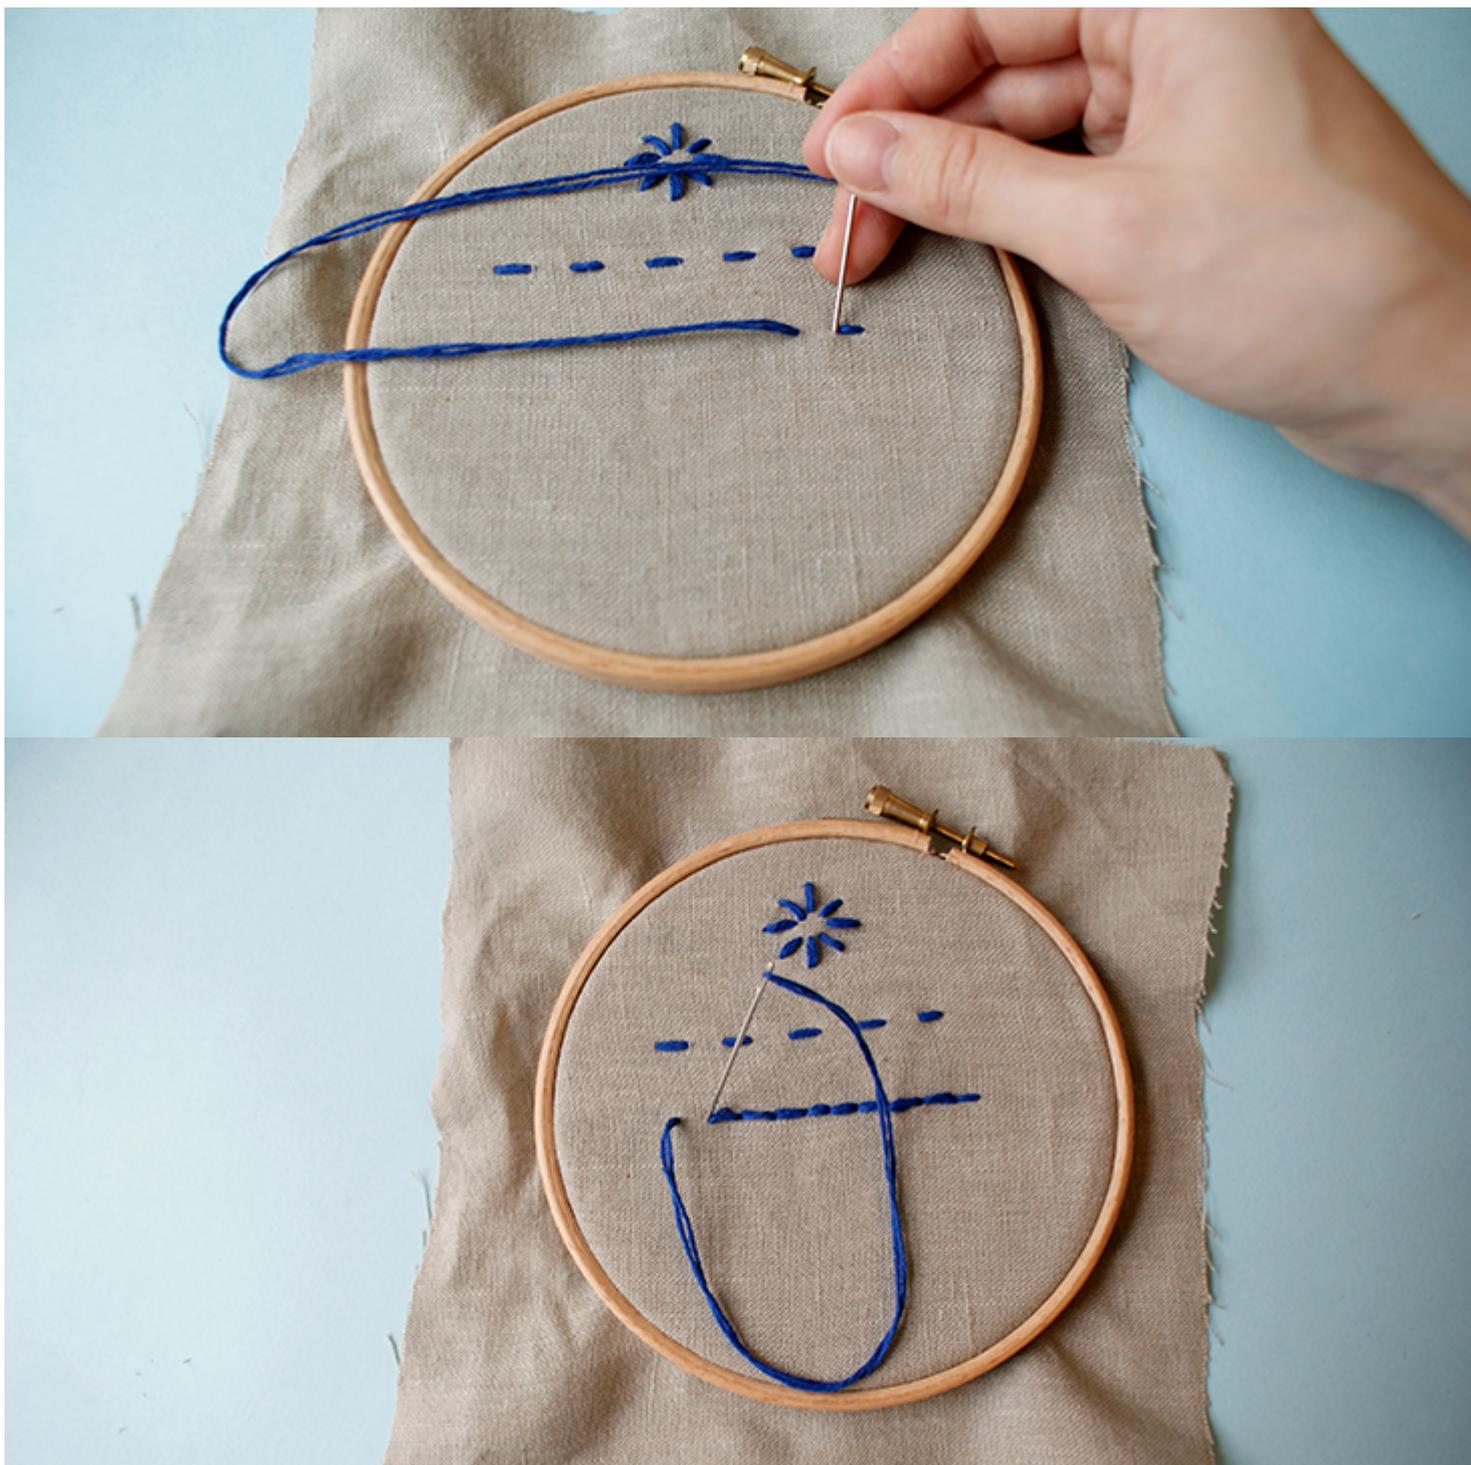

## ***Back Stitch***

Back stitch is great if you want to create a continuous line of unbroken stitching. Individual stitches are made backward to the general direction of embroidery. Backstitch is ideal for following both smooth and complicated outlines. This stitch can also be used for writing.

1. Begin by pulling the needle up through the fabric and do one stitch forward.

2. From underneath, space the needle out the length of your desired stitch, sew through the fabric, and bring the needle back down through the end of the previous stitch.

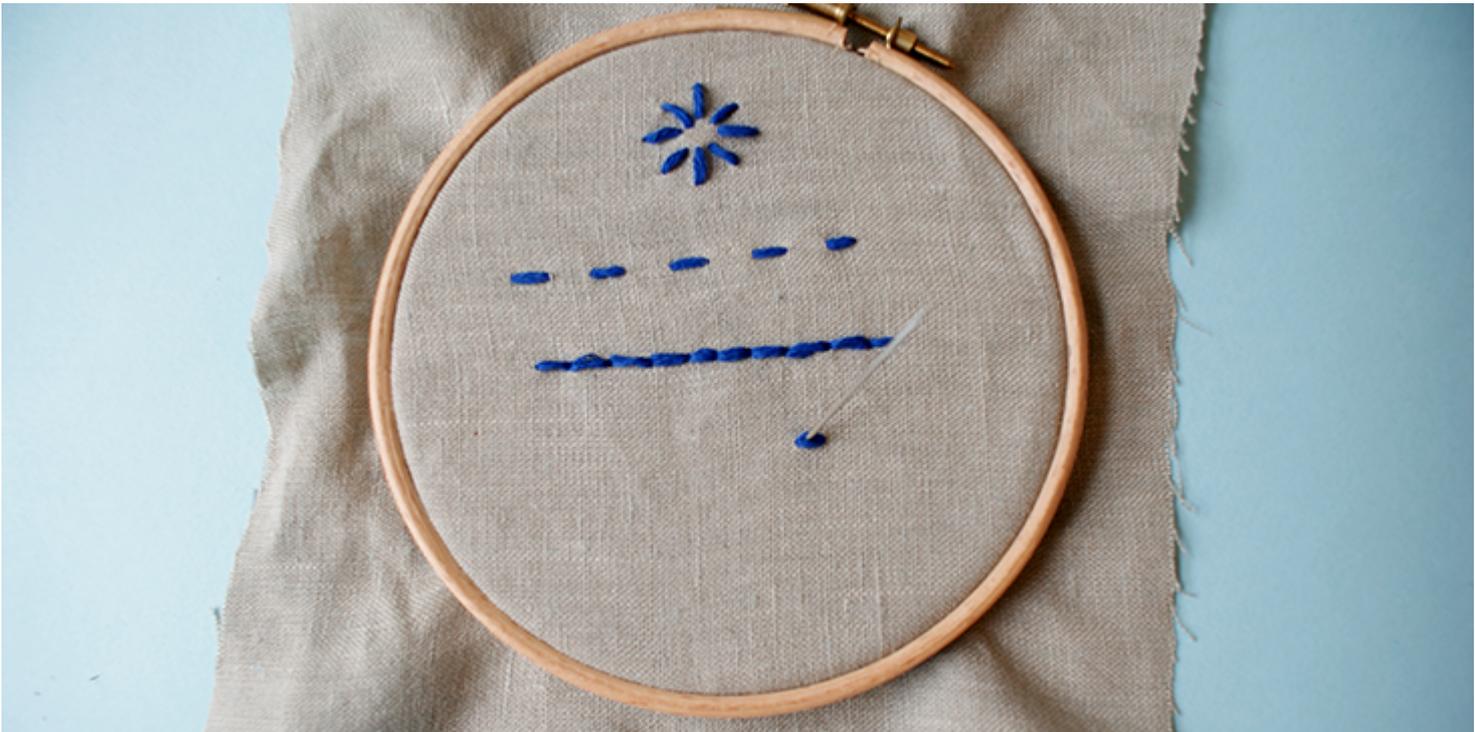

## ***Split Stitch***

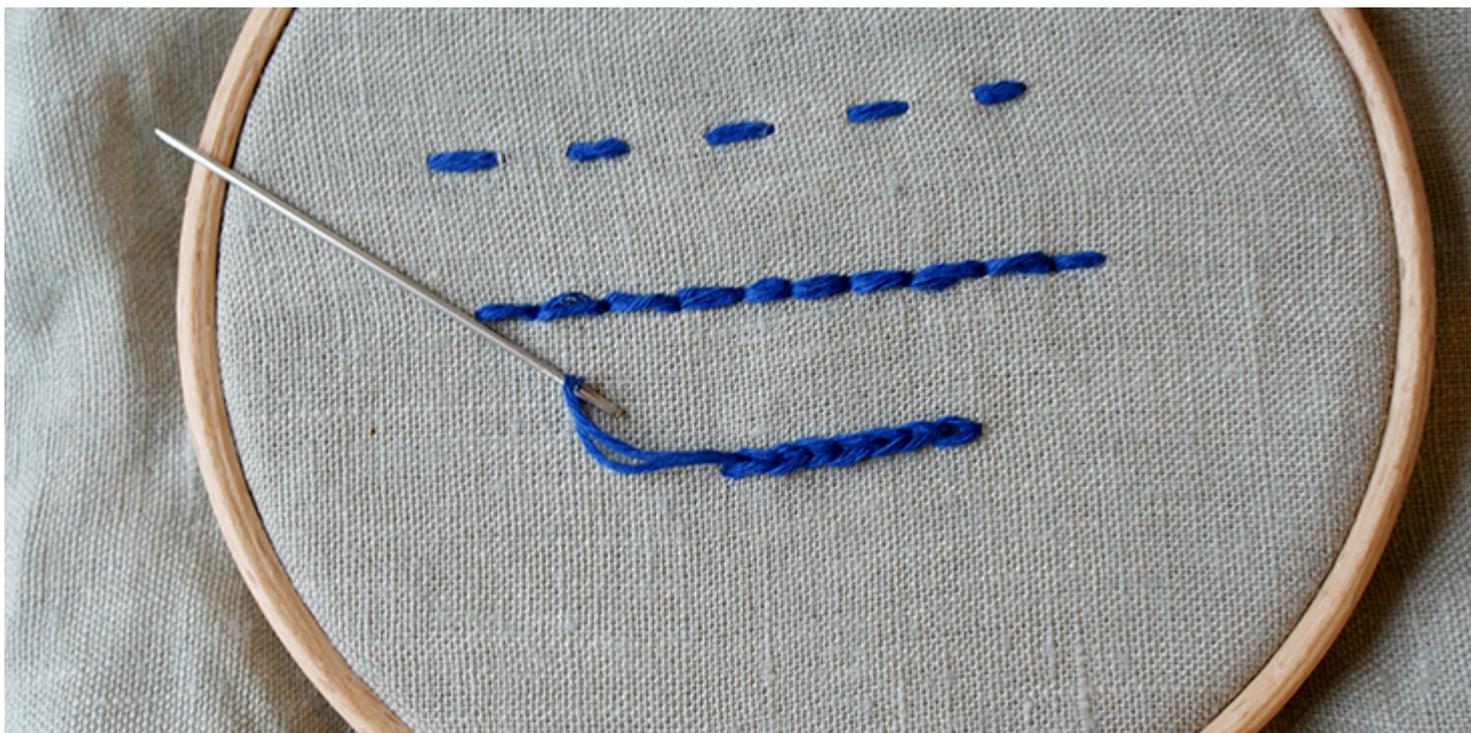

Split stitch is very similar to back stitch, only with some added texture and variation to a line stitching. It is another stitch that is useful for outlining. This

stitch was used extensively in the Middle Ages in England for embroidering faces because it lends itself to subtle shading when it's worked in rows as a filling stitch.

1. Bring the needle to the front of the fabric and create one straight stitch forward.
2. With the needle at the back of your fabric, bring it through the middle of the stitch you just created to split the thread in half.

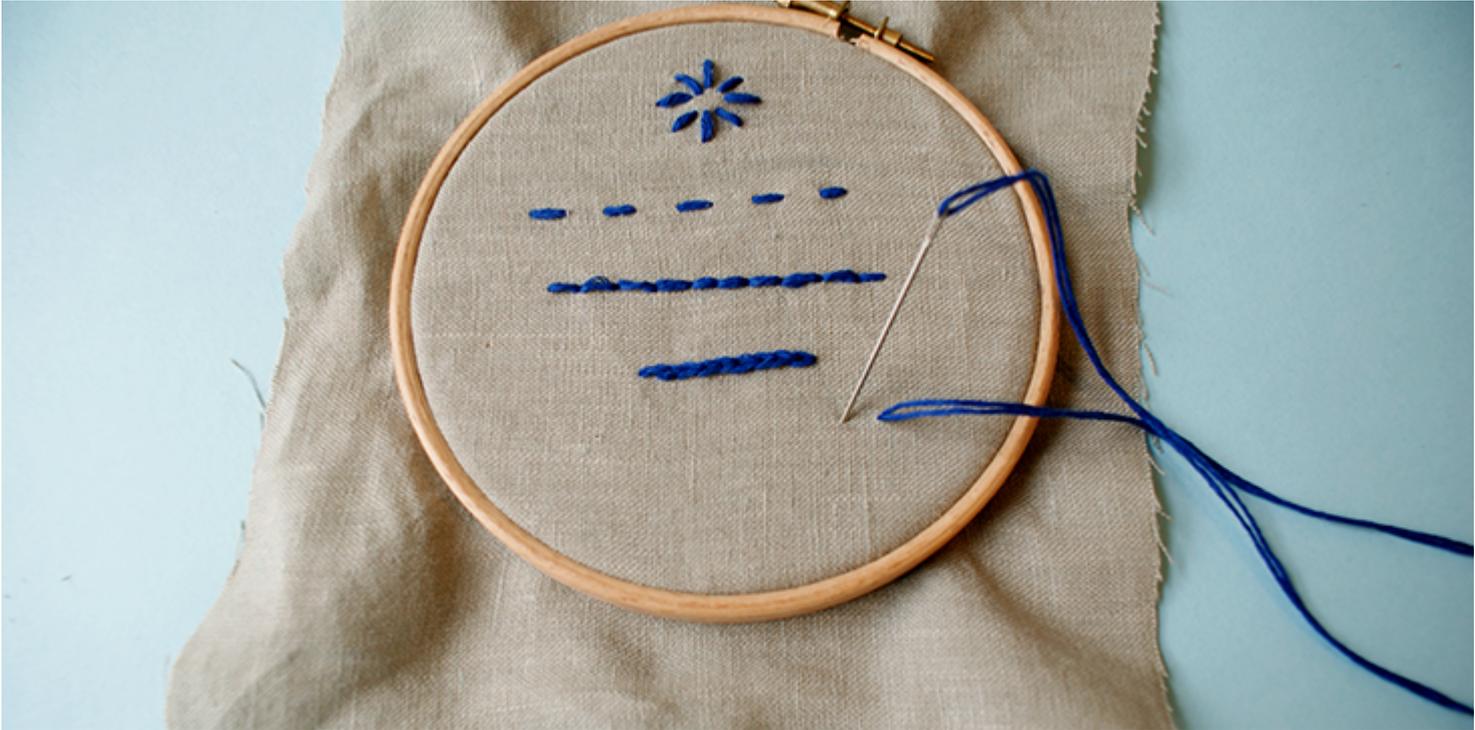

3. Create another stitch forward and repeat.

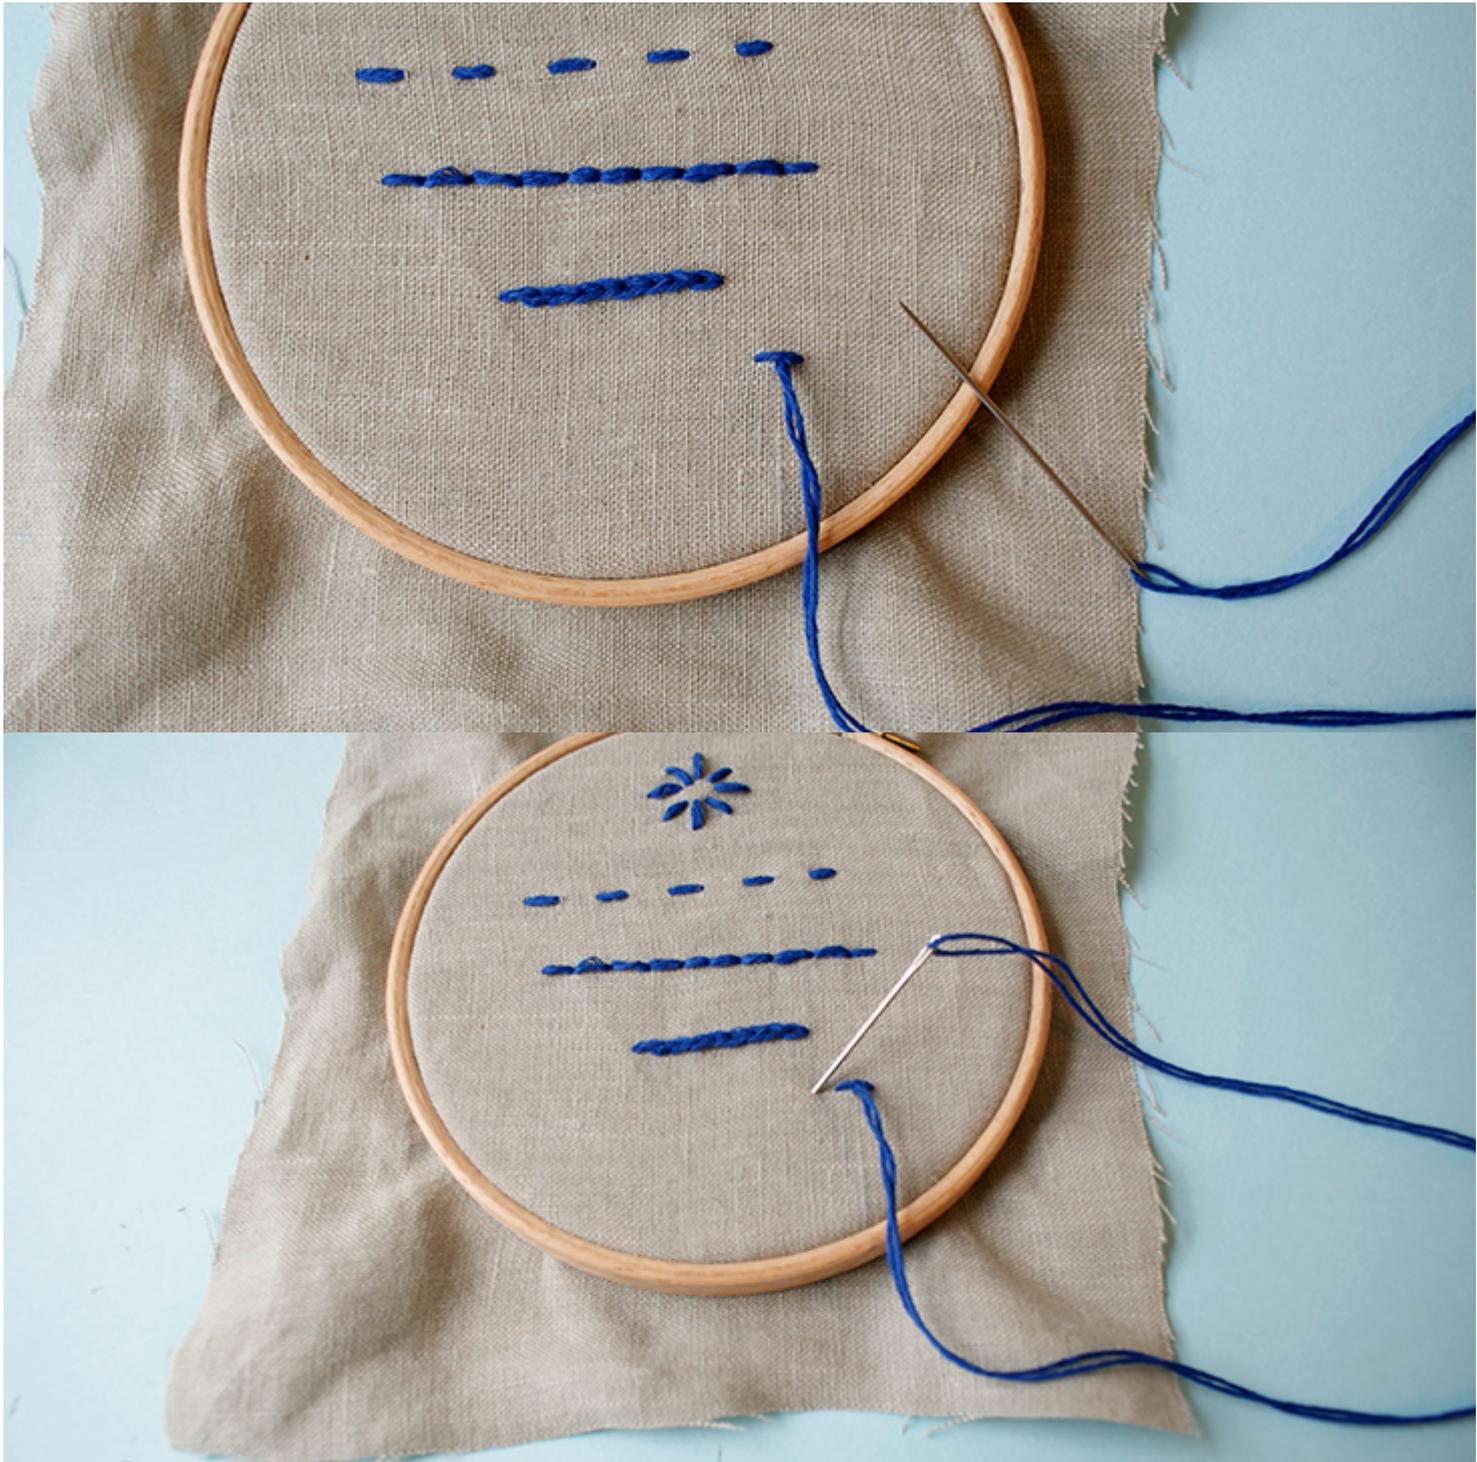

## ***Outline Stitch***

Outline, or stem stitch is great to be used for stems of flowers or vines. It also curves nicely so can be used for particularly swirly patterns.

1. Similar to the split stitch, you create one straight stitch forward.

2. Create one straight stitch forward and bring the needle and thread up underneath the fabric, but instead of going through the center of this initial stitch, you will bring the needle up just to the side of the stitch.

## ***Half Cross Stitch***

Half cross stitch is normally worked in the horizontal and is a series of diagonal lines.

1. Bring the needle up through the fabric. This is your point A
2. Insert the needle diagonally above point A. This is your point B

3. To continue with the stitch, simply bring the needle back up through the fabric directly below point B, and repeat from step 2.

## Cross Stitch

Cross stitch is made up of 2 half stitches and is one of the basic stitches to be used in an embroidery project.

1. Complete the first 2 steps of half cross stitch.
2. With the needle at the back of the fabric, bring the needle up through the fabric directly below point B. This is your point C.

3. Insert the needle diagonally across, vertically above point A. This is your point D.

4. Bring the needle back through point C and repeat from step 1 to create a horizontal line of cross stitches.

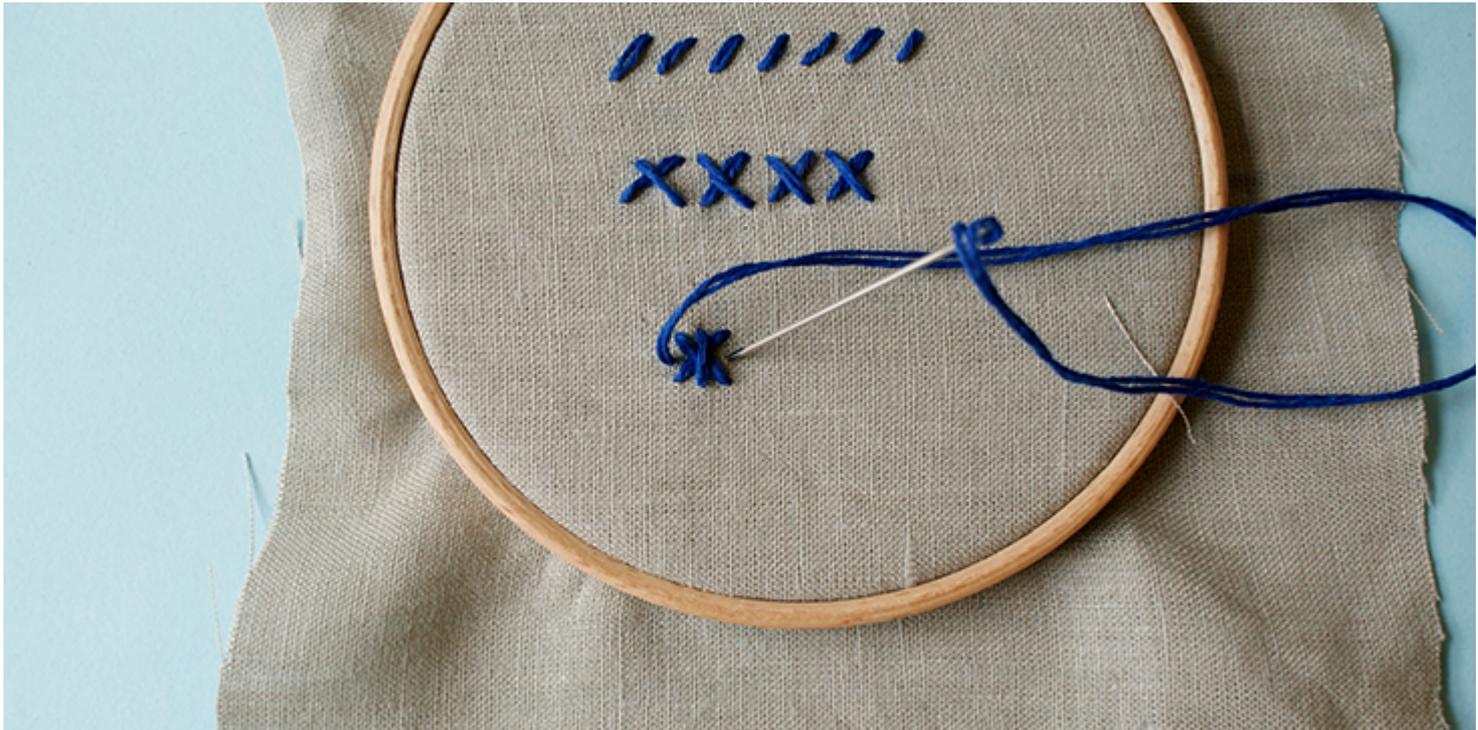

### ***Double Cross Stitch***

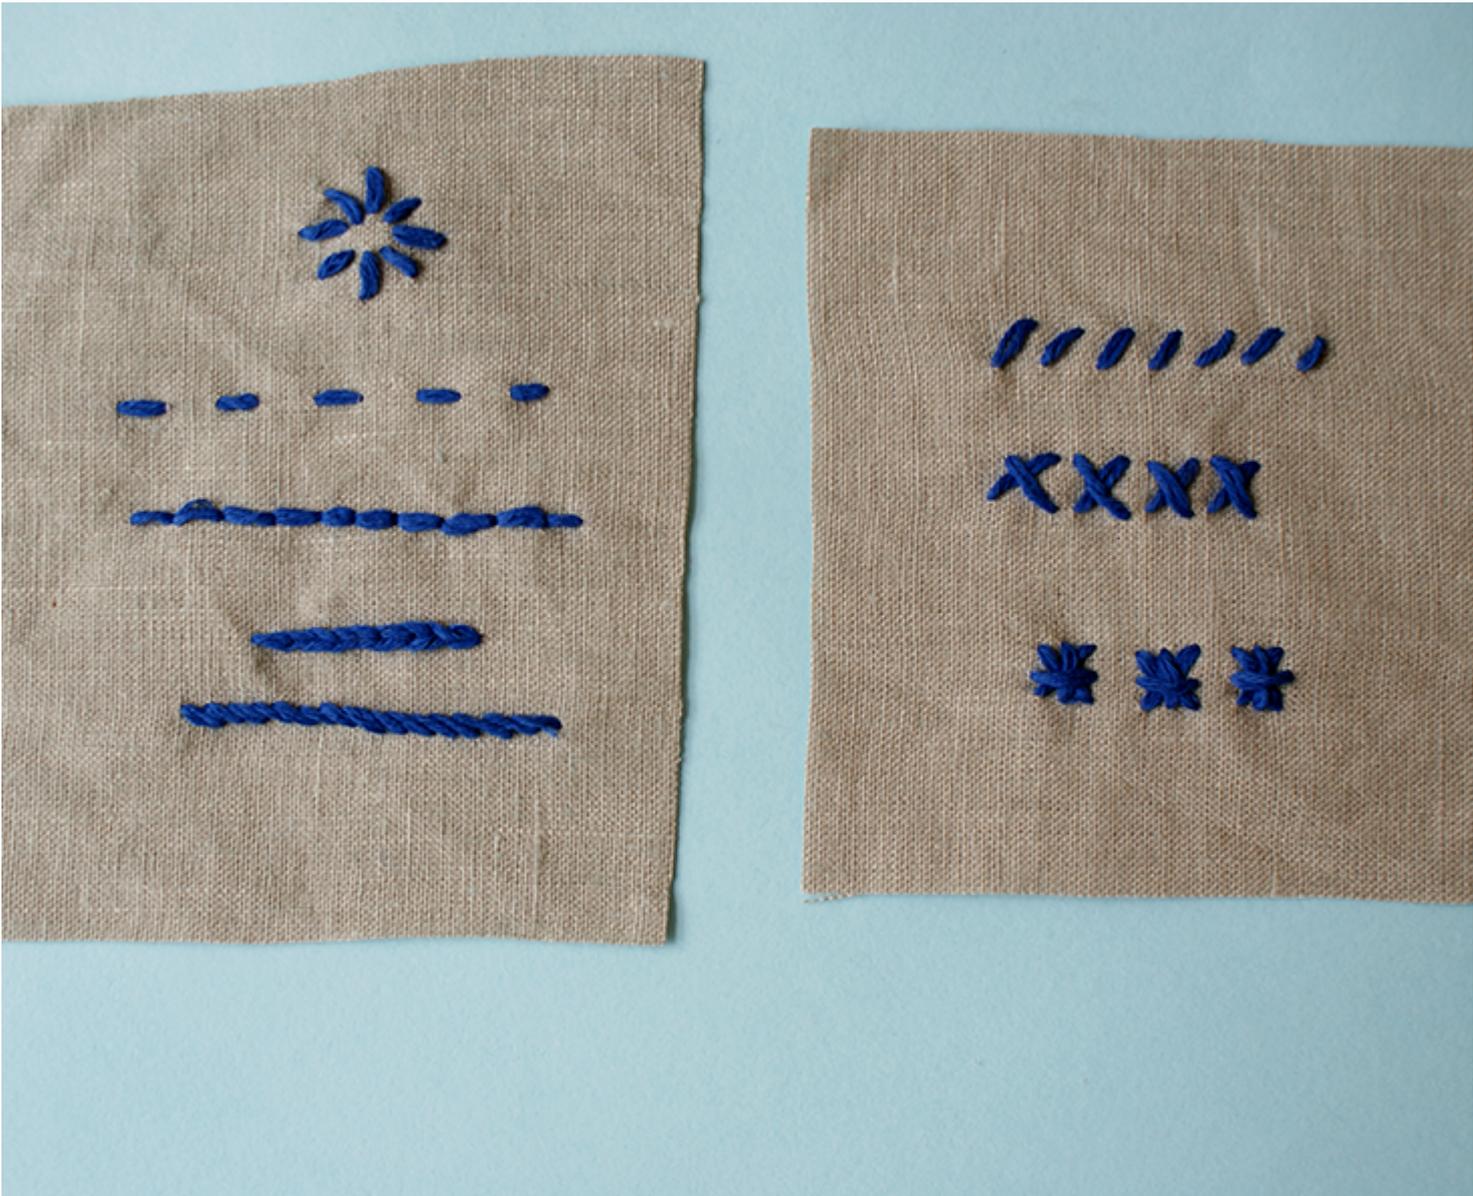

Double cross stitch, also known as leviathan stitch, or the smyrna cross stitch is a great stitch to use as a filler. The make up of a double cross stitch is two cross stitches lying diagonally on top of each other.

1. Complete the first 3 steps of cross stitch.
2. Bring the needle back through the fabric in between point A and C. This is point E.
3. Insert the needle vertically above point E through the fabric. This is point F and lies in between point B and D.

4. Bring the needle up through point G which is in between A and D.
5. Finally, insert the needle horizontally through point H, and it is in between point B and C.

And now you can browse our [Gallery of Fabrics](#) 'Â to inspire'Â a new project to trial your new'Â embroidery skills with, and be sure to come back next week for other stitch variations.
