

Sewing Essentials: How to create Belt Loops Tutorial

Description

Belt loops are one of the essential elements when learning how to sew. Most tutorials might not suggest belt loops, but nothing is stopping you from adding them on, to allow versatility for your garment. Here we will teach you how to do two types of belt loops, fabric and thread.

Tools

Fabric, Matching sewing thread

Bias tape maker, pins, tape measure

Hand sewing needles

Steps

Here are the steps to create your own fabric belt loops.

1. When measuring your loops, take the width of your belt, and add 0.5 inch (1.2cm) of ease, as well as 0.35 in (1cm) seam allowance on both sides.
2. One of the easiest way to do this, is to combine the total length needed and cut a piece of fabric matching that length. Eg: if I need 7 belt loops, and my belt is 1.5 in (4cm) thick, here is how I work out the total length of fabric needed: $7 \times (1.5 \text{ in} + 0.5 \text{ in} + 0.7 \text{ in}) = 18.9 \text{ in}$ length needed.
3. Follow this [tutorial](#), either use the bias tape maker, or just an iron, press the fabric into the form of the tape.
4. Top stitch over the tape, that has been pressed in half, and cut out the desired amount of belt loops.

We are going to show you how to attach the loops onto a waistband of a skirt/trousers/shorts, as well as how to do it on a piece of garment without a waistband; i.e. a dress.

5. For garments ***with waistband***, we will divide the front and back of the waist band into two separate pieces for easier sewing.

6. Place and layout the belt loops evenly onto one panel of the waist band. You can top stitch over these stripes to secure its placement, however you can also carefully lay it out and pin them in place.

7. With the right sides together, place the other waistband panel on top and pin the top edge.

8. Stitch over the top edge and press that seam open. Then also press the seam allowance of the unstitched edges of both panels inwards to the wrong side.

9. Sandwich this waistband onto the bottom panel of your garment, following this [tutorial](#) in regards to matching up notch marks and side seams, pin along the edge and top stitch over. Be aware when going over the belt loops that you slow down the sewing to ensure you don't break any needles (due to its

thickness).

10. Next for the garment ***without a waistband***, i.e. a dress or a piece of garment that has already been made.

11. Fold the seam allowance edge of the belt loops onto its wrong side.

12. Pin the loops onto the desired location on the garment. On a dress normally this would be placed on the side seams.

13. Top stitch back and forth just over the belt loop, both on top and bottom edges.

Here are the steps to create a threaded belt loop

14. Mark two points, indicating the beginning and the end of the belt loop on the garment. The length of this would be the width of the belt plus 0.5 in (1.2cm) for ease.

15. Thread two pieces of floss through the hand sewing needle. This is to add thickness to the end product. you can also use yarn, or other types of thread for this. Knot this thread.

16. From the back of your garment, pierce the needle through at the beginning mark point of the loop.

17. Just slightly below the start point, create a small stitch by sewing the needle into the fabric, without pulling the thread through completely.

18. At the remaining loop of the thread, pull through the longer end of the thread, whilst creating a new loop by holding onto the thread that is being pulled through.

19. Give the new loop a tuck and the previous loop will have been made into a knot.

20. Repeat from step 18, until you have created the desired length of the belt

loop.

21. For the final knot, simply pull the whole thread through, without creating anymore loops or knots.

22. Bring the needle back through to the wrong side of the garment at the marked end point of the belt loop, and knot the thread, trim access thread.

These small elements can seem daunting to the new sewers, but once knowing these small skills, it can help increase your confidence and take on that project you might have put away. Why not check out our huge selection of fabric and see what your next project could be?
