Best 5 Sewing Machines on the Market Right Now for Every Sewist

Description

Hello friends, Alexis Bailey here and Iâ??m so happy to be here to share this information with you and I hope you find it helpful. This year there has been a boom in the making community as people have tapped into their sewing skills to start making masks and other health PPE to combat the Covid-19 pandemic. While this has been a magnificent feat for health workers and communities alike, the demand for sewing machines has highly increased as has their value making sewing the hot new thing, which is pretty awesome if I say so myself. That all being the case, I want to share with you 5 sewing machines that are still decently priced, perfect for various experience levels and are in common supply. Most of these can also be found on online markets locally (i.e. Facebook Marketplace) and other websites as well which I have linked. Enjoy!

1. Brother CS6000i

Average Price: $150-300 depending on source (recommended not to spend more than $350)

Why you should buy:

1. Great for beginners or more experienced sewists alike

2. Computerized features

3. Multiple stitch options

4. Speed control

5. Lightweight

Personal thoughts:

An entry-level sewing machine with more than enough sewing and decorative stitches, the Brother CS6000i is a great machine for all sewing levels. A large free arm makes it perfect for quilting, the computerized features make it user friendly, and the sturdiness makes it the perfect sewing machine for a variety of fabrics and layers. With all of these features and more, the lightweight size makes it the perfect sewing machine to move from room to room for the sewist with a smaller home or sewing area.

2. Janome 2212

Average Price: $200-300 depending on source (recommended not to spend more than $200)

Why you should buy:

1. Affordably priced from a reputable brand
2. Designed specifically for beginners
3. 12 built in stitches
4. Button hole capability

Personal thoughts:

This machine is a great beginner machine for someone who wants to keep things simple and sweet. It has the right amount of stitches for anyone starting off and wanting JUST the right amount of stitches to use, not too much or too little. Itâ??s also lightweight and affordable- a great combination from a great brand.

3. Singer 4432

Average Price: $200-450 depending on source (recommended not to spend more than $250)

Why you should buy:

1. Heavy duty

2. Works well with heavyweight fabrics or multiple layers
3. High speed
4. Metal interior frame (providing great durability)

Personal thoughts:

Known as a true workhorse sewing machine, this high speed sewing machine is a true friend to anyone who works with heavy duty materials, or does production sewing. Its durability and strong power motor make it great for sewing heavy or thick projects. On the contrary if youâ??re looking for a simple long lasting sewing machine for simple projects over a long period of time this is also your friend as well. *Full transparency, some reviews mention this machine may not be able to sew through thicker layers without a hump jumper*

4. Brother SE625

Average Price: $350-650 depending on source (recommended not to spend more than $500)

Why you should buy:

1. Sewing machine AND embroidery machine all in one
2. Amazing features and a variety of stitches
3. Computerized but also includes manual feature
4. Heavy duty metal body

Personal thoughts:

I actually own the refurbished version of this machine and I can say itâ??s a great machine for the aspiring creative. I donâ??t COMPLETELY recommend this machine for beginners however if youâ??re a beginner that likes a little

bit of a challenge go for it! This sewing machine has all of the capabilities of a heavy duty machine with its sewing and embroidery functions but also is gentle and easy enough on basic projects. It also has a speed function if you like to take things slow or fast.

5. Brother 1034D Serger

Average Price: $200-450 depending on source (recommended not to spend more than $300)

Why you should buy:

1. Perfect for finishing seams of garments
2. Easy to thread, though there is a learning curve
3. Hardware is easily replaced and machine is simple to maintenance

Personal thoughts:

As an owner of this sewing machine as well Iâ??m afraid I am biased as far as sergers go, but Iâ??ve owned this machine for 3 years now (bought brand new) with no issues or problems so far. I chose this machine for the list as I feel itâ??s the perfect serger for a beginner. There are so many resources for it and itâ??s relatively simple to use for a serger. If youâ??re wanting to start finishing your seams but want an easy machine to learn to do so on, this is definitely the option I suggest.
