

Hitomezashi Sashiko on the Ashton Top: Part TWO

## Description

This tutorial will focus on the stitching of Sashiko on the fabric pieces cut out for the front and back bodices of the [Ashton Top](#) by [Helen's Closet](#). These fabric pieces have been prepared for Sashiko stitching by drawing 0.5cm x 0.5cm grids on them. For my preferred method for drawing a grid on dark-coloured fabric in preparation for stitching please visit [Hitomezashi Sashiko on the Ashton Top: Part ONE](#).

## ***Stitching Hitomezashi Sashiko***

### ***Materials***

Fabric pieces of the [Ashton Top](#) . We used [FS INSIGNIA BLUE Midweight 100% Linen](#) with Sashiko grids drawn on them. For a detailed tutorial on how to transfer a grid onto dark-coloured fabric, click [HERE](#).

Needle

Thread

Embroidery shears or scissors

Thimble (optional)

## ***Note About Materials***

There are needles, threads and thimbles made specifically for Sashiko that can be purchased in stores and online. I like purchasing my Sashiko supplies from [Upcycle Stitches](#) for good quality products, and responsive service. It is ideal to sew Sashiko with materials and tools that are made especially for this craft, but alternatives can also be used for good results for your initial experiments which can prove time-saving and cost-effective. Below are some alternatives that can be used to stitch Sashiko.

## ***Needles***

A Sashiko needle is sharp, long, and slender, with an elongated eye. The length of the needle facilitates the loading of multiple running stitches while stitching, and the long eye allows thicker Sashiko thread to pass through easily without abrasion or weakening. The picture above shows the 3 traditional Sashiko needles grouped together at the top. Right below them for comparison are an embroidery needle and a cotton darning needle, which are both good alternatives. Make sure that the needles are about 5cm or 2 inches long.

## ***Thread***

Since traditional Sashiko thread (pictured in the middle) is made of cotton, embroidery floss (pictured at the bottom) and Perle Cotton embroidery thread (pictured on the top), which are made of 100% cotton, are both possible alternatives. The Sashiko thread pictured here is thick and the embroidery floss (with all 6 threads) is about the same thickness. The only disadvantage with embroidery floss is that it is a relatively more expensive alternative. I chose to work with the No.8 Perle Cotton for this project even though it looks and behaves differently from Sashiko thread. However, it is thinner, which is better-suited to densely stitched Hitomezashi patterns. There are thinner Sashiko threads made specially for Hitomezashi, but I wasn't able to acquire them in time for this project due to the pandemic. Sashiko threads remain the best option for Sashiko.

## ***Thimble***

A Sashiko thimble pictured on the right, and a regular thimble on the left

The traditional Sashiko thimble is shaped like a ring and is worn on the third finger in the hand that is holding the needle. Using this thimble requires practice to develop coordination between two hands to produce the stitches. One hand holds the needle with the thimble as the fulcrum for pushing the needle through the fabric; the other hand pleats the fabric to help form the stitches. It takes time to become proficient with the Sashiko thimble, but when proficiency is attained, it makes the stitching go much faster. I highly recommend taking a workshop with [Upcycle Stitches](#) to learn “Unshin” – the movement or rhythm of the needle used in tandem with the Sashiko thimble – in order to deepen your Sashiko practice. Running stitches do not have to be produced by “Unshin”; but acquiring this skill will bring one closer to the true spirit of Sashiko, and your patience and dedication will be rewarded. Please note that my hand position in the pictures do not represent “Unshin”. The photos were taken to clearly show the direction that the needle is going to produce the patterns. Even in your early Sashiko explorations, to optimise your enjoyment while stitching, be mindful of your posture and wrist/hand position to prevent overuse fatigue or injury. Using a regular thimble to sew

running stitches is optional – some stitchers prefer to stitch with it, and some without.

## ***Basic Hitomezashi Stitches***

Stitching Hitomezashi Sashiko on FS Insignia Blue Softened Middleweight Linen

In addition to the basic Hitomezashi stitches (Yokogushi and Jujizashi), we will also look at how these stitches can be built on for more complex patterns (Komezashi and Kusari Jujizashi). We will touch on a thread looping technique, sewing a stitch pattern called Kawari Kikkozashi and its variation. Rows of Sashiko stitches are secured by beginning and ending with knots, or with the no-knot method. For the traditional no-knot method, several backstitches are used to secure the stitches. This works really well with Sashiko thread, and has the added bonus of making both sides of the fabric neat and presentable. However, since I am using Perle cotton thread, which has a silkier feel for this project; and the wrong side of the stitching is covered with a facing, I chose to use quilter's knots at the beginning and at the end of the

thread for extra security and better prevention against unraveling.

## ***Yokogushi (Horizontal Rows)***

Yokogushi (Horizontal Rows)

This is the foundational stitch for many other stitching patterns in Hitomezashi Sashiko. After making a quilter's knot, stitch running stitches on a horizontal line. The stitches are made by stitching the length of one square grid alternating with one square gap. On the next row, alternate between stitches and gaps. Continue stitching the rest of the rows, stitching in the same pattern of alternating stitches and gaps.

### Alternate stitches and gaps between the rows of Yokogushi

Because this is usually the first and foundational stitch made on the fabric, the stitching sets the tone and tension for the other stitches that build on this stitch. This is why it is vital to keep a close eye on thread tension. Puckering happens most when stitching this foundational stitch, so pay special attention when connecting between the rows of stitches. Leave some slack in the loop on the reverse side that connects one row to another. This will prevent the fabric from puckering. It is good practice to always check on thread tension at the end of each stitching row.

Reverse side of Yokogushi stitch: take note of the slack left between rows to prevent puckering in the fabric

This stitch can also be turned 90 degrees for a vertical column variation.

Horizontal Yokogushi (left) and Vertical Yokogushi (right)

If the simplicity of this basic stitch appeals to you and fits the style of your garment, you can stop stitching the pattern here. But if you're looking for a more intricate pattern, then let's keep building on this stitch.

### ***Jujizashi ('10' Cross Stitch)***

Jujizashi '10' Cross Stitch

Stitch a vertical stitch in the middle of the horizontal Yokogushi stitch, crossing at right angles. This stitch forms the number “10” character in Japanese and Chinese. Please note that this stitch is not guided by a line on the grid. Determine the position of these crossing stitches by eye-balling it.

Eye-balling the stitches that cross the Yokogushi stitch to form Jujizashi ('10' Cross Stitch)

This is another basic stitch in the Hitomezashi vocabulary and many patterns are built on this '10' cross stitch, like the Komezashi (Rice Stitch).

## ***Building on Basic Stitches***

### ***Komezashi (Rice Stitch)***

Komezashi (Rice Stitch)

Start by stitching Jujizashi ('10' Cross Stitch), which is made up of horizontal stitches, then crossed with vertical stitching lines. Now we will stitch on the diagonal by connecting the diagonal stitch from the centre point of each cross stitch to the next. First stitch all the lines going in one diagonal.

Stitching the first diagonal

When all the diagonal lines going in one direction are stitched, the Sashiko pattern will resemble what's pictured below:

Komezashi Variation with diagonal lines going in only one direction

Then stitch in the lines going in the other diagonal.

Stitching the second diagonal lines to complete the Komezashi (Rice Stitch)

This stitch is called the Rice Stitch because it resembles the Chinese and Japanese character for “rice”.

### ***Kusari Jujizashi (Chain Cross Stitch)***

Kusari Jujizashi (Chain Cross Stitch)

Begin by stitching in Jujizashi (“10” Cross Stitch). Then instead of the diagonal stitches linking the centre point of the crosses in Komezashi (Rice Stitch), the diagonal stitches in Kusari (Chain Cross Stitch) link the tips of the crosses to resemble the pattern of a chain.

Stitch in a diagonal line to connect the tips of the crosses to begin Kusari Jujizashi (Chain Cross Stitch)

Completing the “chain” by sewing another diagonal line to connect the tips of the crosses

Then another diagonal line is stitched close to the other, linking the other tips of the crosses. One row of diagonal crosses is skipped and then another “chain” pattern is stitched.

The pattern with diagonal stitches going only one way looks like this:

Kusari Jujizashi (Chain Cross Stitch) Variation with diagonal lines going in only one direction

To complete the full pattern, stitch diagonal lines going in the opposite direction. This will create a pattern of square chain links with a cross in the middle of each square.

Stitching the diagonal line going in the opposite direction for Kusari Jujizashi (Chain Cross Stitch)

Completing the Kusari Jujizashi (Chain Cross Stitch) Pattern

You may also combine a mixture of both patterns – chain links going only in one direction, and the square chain links – as a design interest.

Kusari Jujizashi (Chain Cross Stitch) and its variation

In Sashiko, we draw from a library of traditional stitch patterns to embroider. Individual creativity is expressed through pattern placement and/or juxtaposition. In the back bodice of the Ashton Top, I have chosen to follow the lines of the back facing, and combined two kinds of stitches: Kusari Jujizashi (Chain Cross Stitch) and Komezashi (Rice Stitch).

## ***Thread Looping***

Vertical Yokogushi stitches pictured on the left before a thread-looping stitch (pictured on the right) is applied

Thread-looping is also one of the techniques of the Hitomezashi vocabulary where the thread is looped between stitches. The following pattern is one of the thread-looping stitches called Kawari Kikkozashi (tortoiseshell stitch variation) and is one of my favourite stitch patterns.

### ***Kawari Kikkozashi Variation One (Tortoiseshell Stitch)***

Kawari Kikkozashi Variation One (Tortoiseshell Stitch Variation)

Begin with the basic Yokogushi stitch pattern with the running stitches going in vertical lines. The thread-loop will be going in a horizontal direction as it runs between two rows of vertical stitches.

Start the thread-loop by making a stitch close to the tip of a vertical Yokogushi stitch.

Pull the thread through.

Using the tip of the bottom end of the needle (where the eye is situated) pass it behind that vertical stitch, and in the same movement, pass it also behind

the vertical stitch situated in the row below the first vertical stitch.

Pull the thread through these two vertical stitches. Now you've made your first thread-looping pass.

Tip: Using the back end of the needle to loop the thread behind the stitches through prevents snags in the fabric and the stitches.

Now continue thread-looping between the two rows of vertical stitches till you arrive at the end of the row. You may loop through several passes before pulling the thread through so that the task goes faster. Just be careful of thread tension when you do this. Pull the thread through gently but firmly so as not to distort the vertical stitches or the thread loops.

Here's a picture of a completed row of thread-looping:

With the back end of the needle, or with your finger, adjust the slack in the tread loops so that the loops have equal tension.

To secure the rows of thread loops, make a stitch between rows. This is

done by sewing close to the tips of the vertical stitches.

This pattern reminds me of fish scales, or a honeycomb.

Thread tension is trickier for thread-looping stitches. The right balance has to

be achieved so that it is not too tight for puckering to happen, and not too loose so that sagging occurs at the vertical stitches where the thread is looped through. In the following picture, the green circle highlights how there is significantly less slack between the vertical rows of Yokogushi when thread-looping is executed. Compared to the generous slack left between rows of the regular stitches in the red circle, the stitches in the green circle have just enough give so that the stitches won't pucker the fabric; but tight enough to prevent sagging, and to support the thread-looping stitches.

Reverse sides of stitching: the right shows the reduced slack between rows of Yokogushi for thread-looping compared to the more generous slack between rows of Yokogushi and Jujizashi on the left

### ***Kawari Kikkozashi Variation Two (Tortoiseshell Stitch)***

Kawari Kikkozashi Variation Two (Tortoiseshell Stitch)

Sew a horizontal stitch positioned in the centre of the hexagons of the first Kawari Kikkozashi variation.

Kawari Kikkozashi Variation Two: Stitching a horizontal row in the centre of Kawari Kikkozashi Variation One

Take note that this stitch is not guided by a grid line, and is made by eyeballing its position in the centre of the hexagon. Pictured below is the completed front bodice of my Ashton Top which is stitched with the two variations of Kawari Kikkozashi (Tortoiseshell stitch).

Kawari Kikkozashi Variation One (left) and Two (right)

The back bodice has the Komezashi (Rice Stitch) and Kusari Jujizashi ('10' Cross Stitch).

Kusari Jujizashi (left) and Komezashi (right)

It is up to you to embroider whichever Hitomezashi patterns that you want for embellishment. You may embellish only the front bodice or only the back, or you may also embellish the hem of the Ashton Top which has a hem facing. You may even decide to do an all-over stitching of the entire garment. If so, then I suggest to sew a full lining of the top to protect the stitches.

## ***Sewing the Ashton Top***

Completed Sashiko on the front and back bodices of the Ashton Top

Now that the Sashiko for the two bodices have been completed, what's left to do is to sew up the Ashton Top, referring to the sewing pattern instructions provided by Helen's Closet.

I want to offer a word of caution when sewing up garments with Sashiko stitching embroidered on it. Most of the stitching will start and end close to the seam allowances. When it is required to grade the seams or snip into the seam allowances, be careful NOT to cut into the embroidery stitches. Check both sides of the fabric before cutting or snipping to make sure that you are not cutting into any embroidery stitches or loops.

When grading or snipping into the seam allowance, avoid cutting into the Sashiko stitches

## ***To Conclude***

Hopefully, you now have adequate information to start off on your adventures in Hitomezashi Sashiko stitching. These patterns are just several out of the wide range of stitching patterns that are available.

This method of using graph paper to help transfer the grid can be used for Moyozashi Sashiko as well to draw in the patterns. One benefit of this method is that with this graph paper pattern, it makes it easy to transfer the grid for multiple versions of Ashton Tops.

I wish you happy stitching on your Sashiko journey. If you have any questions, do not hesitate to comment below or you can also drop me a note on [Geri In Stitches](#).
